

“Comfort mushroom” sounds
a bit strange, so just say:
“Yes”.

Minor detail,
major effect.

The TITAN comfort mushroom cam demonstrates the fact that huge progress can be made on a small scale, incorporating enormous advantages in a tiny space for manufacturers as well as end-users.

Benefits for fabricators:

- Makes assembly simple and precise with its infinitely variable height adjustment
- Automatically compensates for clearance tolerances, which means it can reduce adjustment work considerably both during production and assembly on site
- Prevents costly and time-consuming complaints
- The compression adjustment of the comfort mushroom also has an effect on the individual adaptation to tolerances
- Also used in the PORTAL and KFV ranges

Benefits for users:

- Ensures smooth and faultless opening, tilting and closing of windows
- Automatic alignment for changing conditions, for example temperature fluctuations
- Guarantees a durable locking system that is optimally adjusted at all times
- Ensures individual adaptation to tolerances

COMFORT MUSHROOM CAM WITH INTEGRATED HEIGHT ADJUSTMENT

System versions: Basic security to RC2.

The TITAN family's intelligent system concept opens up new potential in terms of both fabrication and logistics.

Benefits for fabricators:

- Effective system design for general use of the comfort mushroom cam as a locking bolt
- Only a few extension components are required to transform a basic security level window into any intruder resistance level 1 ('RC1') or intruder resistance level 2 ('RC2') window; these components no longer need to be cropped
- A minimal number of components ensures lower storage costs
- We also develop solutions beyond intruder resistance level 2 ('RC2') with our customers
- Guarantees RC classes in accordance with DIN EN 1627 ff. by ensuring compliance with the licensing agreements regarding the relevant hardware configurations and installation specifications via our system security manuals for timber and PVC windows
