KÖMMERLING®

Beautiful new *window world*

Windows and doors are a part of your living space and your totally individual living design. The decision about the right window system should therefore be given your careful attention.

Windows emphasise the character of your house

Windows are amongst the most demanding construction elements of a house. Windows are more than just a means to a purpose. They give life to a facade and increase the material value of a house. Windows are construction elements with the most design variety. We provide you with everything you need for your unmistakably individual windows: Any possible window form and layout. Wide colour range. Bars – applied or internal between the insulating glazing. Elegant handles. From standard glazing to special glass to highly profiled glass, for example for your bathroom or front door to keep out unwanted eyes.

All PVC-U profiles are stabilised with eco-friendly calcium-zinc instead of lead. This not only promotes the protection of our environment, but also enhances the quality of the window over its entire service life – for greater resistance to and cleaner recyclability. Environmental protection that pays off.

noise protection and safety

Even our standard design window systems have excellent insulation and sound protection properties. These values can be improved even more with special thermal or noise protection glazing. In addition to the basic safety features of this window system, a top level of security can be achieved with regards to break-in prevention with security hardware, reinforced glass and locking handles.

- ▶ Modern window design of straight lines with slender profile faces
- ▶ Stable profile cross-section with excellent statics for long window durability
- ▶ The integration of an innovative, utility patent protected steel reinforcement system creates a 6-chamber structure with superior thermal protection properties and an U_i value of $1,3 \text{ W(m}^2\text{/K)}$.
- ▶ Easy care and never needs painting
- ▶ All PVC-U profiles are stabilised with eco-friendly calcium-zinc "greenline" instead of lead

EuroFutur Classic

Window system with 70 mm installation depth, offset design, with grey seals.
